

Economic Information

Bergamo Chamber of Commerce is the main observatory for the local business system and a connection centre for the information networks on the province economy. The unit for studies and economic information produces quarterly reports on Bergamo economic situation and manages the most complete network system of statistical and economic information on the province, featuring databases on business, demographics, foreign trade, employment and other indicators of the local economy.

We also handle the publication of the construction work price report, as well as the activities of the statistics office, in coordination with the system of Chambers of Commerce and regional and national statistics bureaus.
